| Program Title *   | Fundamentals of HIV Infection for Community Health Centers, Primary Care Providers and FQHCs  |
| Program Date/Range: *   | January 8, 2020–January 7, 2021   |
| Type of Program *   | conference  |
| Knowledge needs improvement / change: (The participants don't know "what" to do...) *               | Yes   |
| This course will help participants improve or change knowledge related to:                          | Identification and screening of persons at risk for HIV. Decreasing HIV associated stigma. Understanding the relationship between the distinct stages of the disease process and negative patient outcomes. |
| Competence needs improvement / change: (The participants don't know "how" to do it...) *            | Yes   |
| This course will help participants improve or change competencies in the following ways: *          | Increase HIV screening of rural at risk and vulnerable populations. Provision of resources regarding linkage to care.   |
| Performance needs improvement / change: (The participants "just don't" do it, for some reason...) * | Yes   |
| This course will help participants improve or change performance in the following ways:             | By outlining the epidemiological increase of HIV cases in rural areas of West Virginia and recognizing the need for increased screening.  |
| Will the educational objectives reflect these desired changes? *                                    | Yes   |
| Is this activity designed to improve patient outcomes? *  | Yes   |
| If so, how? *   | developing and understanding of the complexity of care for Persons Living with and at risk for HIV including: health impact during the designated   |

disease stages, case identification and linkage to care, impact of real and perceived stigma related to HIV

Check the needs documentation that you used in selecting these topics. Attach documentation as described. \*

- m&m reports (attach examples)
- review of literature (attach reference list or article)
- govt. statistics/data (attach statistics/data)

Why does this Gap between current and desired practice exist?

HIV infection is an uncommon differential diagnosis among many rural health providers.

How will this activity help close the practice gap / fix the identified problem(s)?

By offering the most recent HIV epi data.  
Develop an understanding of how the distinct stages of HIV related to the improvement in patient outcomes over the life span.  
Understand the means in which stigma whether real of patient-perceived continues to negatively impact patient care.

This activity should improve:

- Competence
- Performance
- Patient Outcomes
